

George (Jorge) Argibay

George (Jorge) Argibay is a veteran in the field of MRP/ERP software with over 50 years of experience designing, developing, and implementing enterprise resource planning systems. He began his career in 1974 and has since worked extensively with manufacturers and enterprise software platforms throughout the Americas.

He is the founder and CEO of Aboard Software, a U.S.-based Software Technologies R&D company, where he led the development of OBI1 (Object Business Intelligence 1), a groundbreaking meta-modeling platform that allows non-developers to modify and extend enterprise applications at runtime.

George also designed Active ERP (aERP), a complete MRP/ERP suite built on OBI1, and a custom-trained ChatGPT Assistant designed to interpret and act on the system's meta-information. These innovations position Aboard Software at the cutting edge of enterprise automation, artificial intelligence, and no-code development.

Throughout his career, George has combined deep technical expertise with a practical understanding of how software must adapt to real business needs. His work continues to empower mid-market companies with the tools to modernize operations without the complexity and cost of traditional ERP platforms.
